

MORE THAN A PARTNER, A DIFFERENCE MAKER

At Precision Design Solutions (PDS), our goal is to better each other by thoughtfully tailoring solutions to your nuanced needs at every turn.

It's an approach that's been validated by industry-leading client retention — repeat business that's driving our exponential growth.

It's about pairing the right talent from our experienced, in-house engineering team with the right technology from our vast arsenal of geospatial tools and resources. Here, you won't find cookie cutters or one-size-fits-all solutions.

Instead, we have expert users who routinely add game-changing efficiency to projects.

Once we make this critical match, quality and speed come naturally, compressing cycle times and eliminating wasted effort. Because time to market is contingent upon accurate engineering.

This results in increasing our customers' ability to connect homes, towers, and businesses quicker.

“ Accelerating network deployments, one customer at a time. ”

REACH & CAPABILITIES

Because of our large footprint, we're able to expedite the mobilization of resources to markets as needed. Through the use of right-fit technology, our design team can work in a remote capacity via a multi-user database where we store fielding and design data. Having worked with Tier 1 providers, small and mid-sized EMCs, WISPs, and various governmental agencies, we understand the nuance that comes with each project.

These services are offered through a turnkey solution or standalone.

FIELDING SERVICES:

Extensive experience working in geospatial environments leveraging various forms of mobile data collection, including IKE, Katapult, AGOL & 3GIS. All of our teams have a thorough understanding of NESC, anchoring & tensioning.

- Make-Ready
- Make-Ready Engineering
- PLA
- ROW data collection
- General Pole Data Collection

DESIGN SERVICES:

Vast experience working with 3GIS, AGOL & CADD.

- FTT(x) design
- Permit Drafting and Design
- Construction Drawings
- As-Built
- HLD
- Basemapping

ABOUT US

Precision Design Solutions has built a team of industry professionals with a proven ability to deeply understand and solve for each customer's unique needs. Company President AJ Mallamace has led large-scale network deployments for Google Fiber, AT&T, Verizon, Frontier Communications and various EMCs. Over the years, he has worked for Atlantic Engineering Group, Ervin Cable Construction, and 3GIS, where he built engineering teams from the ground up. Throughout those years, he engineered over 400,000 HHP on various FTTH deployments, 12,000 miles of middle-mile solutions, small cell, and 5G. Seeking to create a bigger impact and fill a void within the industry, he founded Precision Design Solutions, a company that is truly dedicated to Integrity, Passion, and Teamwork.

"If you want to go fast, go alone. If you want to go far, go together".

This rings true at PDS, where working together to cater to each customer's unique needs is paramount to shared success.
